

PRODUCT SUMMARY SHEET

DIGITAL TERRAIN MODEL - DTM:

The *Digital Terrain Model (DTM)* data sets provide true ground height information (excluding features above ground e.g. buildings, vegetation etc.), and are available for South Africa and the majority of the African regions.

*Height
Data*

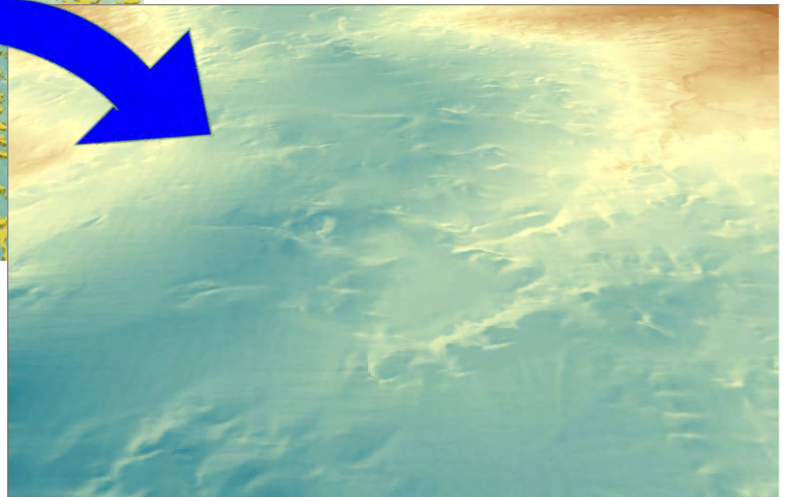

CORE QUESTIONS:

- How can I determine visibility from a particular area? (Viewshed analyses or Radio Frequency planning)
- Determine slope and drainage patterns in a watershed area. (Hydrological modelling)

Terrain with buildings

Terrain only

Coverage:	South Africa, Africa (selective)
Unit of sale:	National, Regional
Format:	Raster

FULL PRODUCT CONTENT:

- Raster digital terrain data with data sets ranging between 1 metre and 30 metres horizontal resolution with appropriate height accuracies.
